Before the mobility

<i>Table A - Traineeship Programme at the Receiving Organisation/Enterprise</i>	
Planned period of the mobility: from 06/2026 to 09/2026	
Traineeship title: Cold gas formation in a shocked wind	Number of working hours per week: 35
Detailed programme of the traineeship: The trainee will analyze hydrodynamical simulations of cold gas formation at an astrophysical wind-background shock interface. This will involve: • Accessing and loading data outputs stored on HPC systems, and visualizing raw data outputs using Python (Goal A, ~2 weeks) • Preliminary analysis of evolutionary trends by characterizing the gas phases, identifying cold sub-structure, cloud mass distributions, etc., using a combination of existing and self-produced Python codes (Goal B, ~1 month) • Establishing salient variables for cold gas formation at a shock interface, in particular focusing on the impact of wind Mach number and background medium density through statistical analysis of cold gas growth outcomes (Goal C, ~1 month). • If time allows, finalizing results into a short article suitable for submission to Research Notes of the American Astronomical Society (or a similar publication) (Goal D, ~2 weeks). • Throughout, trainee will present their in-progress results in the ASGAR research group meetings	
Traineeship in digital skills: Yes ☒ No ☐	

Knowledge, skills and competences to be acquired by the end of the traineeship (expected Learning Outcomes):

- Interpretation of numerical data used in science and ability to draw conclusions.
- Analyzing and visualizing scientific data using Python.
- Learning how computer-aided scientific modeling and simulations can be used in education
- Acquiring basic working skills in remote academic systems (remote server, terminal)
- Developing scientific process skills (data collection, analysis, interpretation)
- Developing the ability to explain complex scientific concepts in a simple and understandable way
- Gaining experience in research-based and technology-supported teaching approaches in science education

Monitoring plan:

The trainee's progress will be monitored through:

- Weekly progress reports submitted to the supervisor.
- Regular feedback meetings with the mentor.
- Evaluation of completed digital education projects and assignments.

Evaluation plan:

The final evaluation will be performed by the project mentor/supervisor, and the bulk of the evaluation will hinge on completion of the statistical analysis in Goal C of the detailed program described above. Progress will be assessed at the timeline's midpoint and on completion, and additionally as-needed during weekly meetings. Success will be measured by the quality and timeliness of completed research tasks and the demonstrated development of research competencies.
